

IFQM Employee Ideation Tool

User Manual — IFQM Platform Console (Superadmin)

1. Signing In

Go to the platform's web address and sign in on the same **Sign In** screen everyone uses — there is no separate platform-admin login page. Enter your email or mobile number and your password, then click **Sign In**. Once signed in, you're taken straight to the platform console and kept there — you cannot browse into any individual organisation's screens.

Your account is created for you by another platform admin (see §9.6). Use **Forgot your password?** on the Sign In screen if you ever forget it — it emails you a reset link.

2. Finding Your Way Around

The left sidebar shows **Organisations, Registrations, Support Tickets, Plans, Billing, Login Activity, Settings** — this is your entire console. The top bar shows dark mode, language, notifications, and a chip reading "**Superadmin signed in as {your name}**", plus **Logout**.

Note: Clicking your name chip doesn't do anything useful for this account — ignore it. There's no personal profile page for platform admins.

Everywhere in this console you'll see a quiet reminder: **you cannot see individual employees, idea content, or files from any organisation**. You only ever see counts and aggregates. The one exception is Support Tickets, where a customer's own words appear because they chose to write to you directly.

3. Organisations (your home screen)

Click **Organisations** to see every customer on the platform: totals across the top (active, on hold, total users, ideas submitted/implemented, sent to QCMS, gone quiet, never signed in), then a searchable, filterable table of every organisation.

To create a new organisation directly (skipping the self-service application process): click + **New Organisation**, fill in the organisation name, its code (auto-fills, but you can edit it), and the first admin's name/email/password, then click **Create Organisation**. You'll get a one-time confirmation popup with the assigned code and admin email — there's no way to retrieve this again, so note it down.

To act on an existing organisation, click the : menu on its row:

- **View overview** — opens the full detail page for that organisation (§5).
- **Put on hold / Activate** — toggles their access immediately, no confirmation. "On Hold" is what your team calls suspension.
- **Manage / delete** — also opens the detail page; deletion itself requires typing the org's code, so it's not a one-click action from here.

Click **CSV** to export the currently filtered list.

4. Registrations

Click **Registrations** to review applications from organisations that applied for a workspace themselves. This is the approval queue for the public sign-up form.

Each pending application shows a **Details** toggle with everything they submitted (company info, statutory details, business profile, address, applicant contact). Two buttons appear on a pending row:

- **Reject** — asks for a reason (optional), then rejects. Nothing is provisioned.
- **Approve** — opens a dialog to confirm the organisation code, pick a plan (or decide later), set a trial length, and add an internal note, then click **Approve and create workspace**. This is the moment the organisation and its first admin account actually get created — nothing exists before this. You'll get a one-time banner showing the new admin's temporary password; copy it down, it won't be shown again.

Personal email exceptions — normally an application needs a real company email domain. If a legitimate small business only has a Gmail-style address, click **Manage** at the top of the page to add an exception — either one exact address, or a whole domain (which reopens that provider for everyone, so use it sparingly). Always add a reason; it stays on record.

5. Managing One Organisation

Reached via **View overview** / **Manage** from the Organisations list. Everything about one customer lives here:

- **Subscription and billing** — assign or change their plan, set trial length, and record a payment (extends their paid period and lifts a hold if they were suspended for non-payment). Each of these three is its own separate button on purpose, so fixing a typo can't accidentally also record a payment.
- **Usage** — employees, ideas, approvals, implementations, QCMS pushes, storage — counts only.
- **Organisation Admin Contacts** — your support contacts for this org. Click **Reset Password** next to any admin to issue them a new temporary password immediately (no confirmation) — it's shown once, copy it down, and it signs out their existing sessions.
- **Manage Organisation** — rename the org or change its code (this breaks existing login links and signs everyone out — warn them first), and suspend/reactivate.
- **Danger Zone** — deleting an organisation. Type the organisation's exact code to confirm, optionally tick "**Also permanently delete the database and all of its data,**" then click **Delete Organisation**.

This is the single most destructive action in the whole console — there is no further confirmation beyond typing the code correctly, and it cannot be undone.

6. Support Tickets

Click **Support Tickets** to see every request raised by any organisation, platform-wide. Click a ticket to open its thread — you can reply to the customer, or tick "**Internal note — IFQM staff only**" to leave a note nobody outside IFQM sees (these appear with a clearly different, dashed border so they're never

confused with a customer-visible reply). Status and Priority dropdowns save automatically as you change them.

Click + **New Ticket** to open a ticket on an organisation's behalf yourself (maintenance notices, incident follow-ups) — pick the organisation, write a subject and message, and send.

Use the **bulk-archive panel** to tidy away many resolved/closed tickets at once — archiving is reversible, nothing is deleted.

7. Plans

Click **Plans** to manage the catalogue every organisation can be assigned to — this affects the whole platform going forward, but editing or retiring a plan never changes what an existing customer is already paying.

Click + **New Plan** for a 4-step wizard: **Info** (name, code, tier, description) → **Pricing** (amount, billing cycle including a genuine non-expiring **Lifetime** option, GST handling) → **Limits** (max users, storage, monthly request allowance — a "Use suggested" button fills in a sensible number for you) → **Review**, where you must explicitly confirm the price before **Save plan configuration** unlocks.

Click **Delete** next to an active plan to retire it — a confirmation explains plainly that this only removes it from future selection; every organisation already on it keeps their price and access exactly as-is.

8. Billing (platform-wide)

Click **Billing** to see every organisation's payment status in one table — distinct from any single organisation's own billing screen. Summary tiles up top flag organisations with no plan set, expiring soon, or already lapsed.

Click **Manage** on any row to assign/change their plan, set trial length, or record a payment — same three independent actions as the organisation detail page.

Two buttons matter here:

- **Preview lapses** — a safe dry run. Shows what *would* happen, changes nothing.
- **Run sweep** — the real thing. Actually marks organisations lapsed and puts them on hold per the billing rules, with **no confirmation dialog**.

Always click Preview before you click Run. Run sweep has no undo and no "are you sure."

Send Monthly Invoices sends the recurring invoice email to eligible paying organisations.

9. Settings

Click **Settings** for six tabs:

9.1 New-Tenant Defaults

The starting configuration every *future* organisation gets (SLA days, feature flags, the default approval chain). Changing this never touches organisations that already exist.

9.2 Organisation Settings

Look up and edit one organisation's own settings on their behalf — SLA, feature flags, and their SMTP mail settings — without signing in as them.

9.3 Messaging & ZeptoMail

Genuinely platform-wide. Configure the SMS/DLT gateway (for one-time-code delivery), the OTP sign-in policy (code length, lifetime, retry limits), and the ZeptoMail fallback email provider used when a tenant hasn't set up their own mail. Use **Send test message** / **Send test email** to prove a setting actually works before anyone depends on it — a test SMS costs a real message credit.

9.4 Maintenance

The platform-wide kill switch. Turning it **on** locks out every organisation immediately — sessions already open stop working on their next request; your own platform-admin access is unaffected so you can turn it back off. **Turning it on asks you to confirm; turning it off does not.** You can also edit the notice shown to locked-out users.

9.5 Payments

The shared Razorpay merchant account used by every organisation's own Pay button. Save your keys, click **Test keys**, then **Turn payments on**.

9.6 Platform Admins

Manage who can access this console. **Add Platform Admin** to create a new account (minimum 12-character password) — remember, every account here can reach every organisation. Use **Change My Password** to update your own.

10. Login Activity

Click **Login Activity** to see sign-in history for IFQM staff only — not your customers' own employees signing into their organisations. Filter by outcome (signed in / wrong password / locked out), search by name or address, and export to CSV. Data here is kept for 180 days.

11. Signing Out

Click **Logout**, top-right, from anywhere. No confirmation, immediate.

Quick Reference

I want to...	Go to
Create a new organisation directly	Organisations → + New Organisation
Approve or reject a workspace application	Registrations
Suspend or reactivate an organisation	Organisations → : or the org's own detail page
Delete an organisation	Organisation detail → Danger Zone

I want to...	Go to
Reset an org admin's password	Organisation detail → Organisation Admin Contacts
Reply to a customer's support request	Support Tickets
Add or edit a sellable plan	Plans
Check who's about to lapse	Billing → Preview lapses
Turn the whole platform off for maintenance	Settings → Maintenance
Configure the SMS/OTP or email provider	Settings → Messaging & ZeptoMail
Add another platform admin	Settings → Platform Admins
See who signed into this console	Login Activity

A Few Things to Remember

- You genuinely **cannot** see individual employees, idea content, or files belonging to any organisation — only counts. The one exception is what a customer writes into a support ticket.
- **Deleting an organisation cannot be undone.** It's gated only by typing the org's exact code correctly.
- **Run sweep** on the Billing page has no confirmation — always click **Preview lapses** first.
- **Turning Maintenance Mode ON** asks you to confirm. Turning it **off** does not — it's treated as always safe.
- Editing New-Tenant Defaults only affects organisations created *after* the change, never existing ones.
- Retiring a plan never affects organisations already on it.
